

### DESCRIPTION:

The products are gate driver opto-couplers in the SOP5 package. The device consists of an infrared LED optically coupled to an integrated high-gain, high-speed photodetector IC chip. It provides guaranteed performance and specifications at temperature up to 110°C. It is physically smaller and compliant with international safety standards for reinforced insulation. It thus provides a smaller footprint solution for applications that require safety standard certification. An internal noise shield provides a guaranteed common-mode transient immunity of  $\pm 35$  kV/ $\mu$ s. It is ideal for small class IGBT and power MOSFET gate drive. The products are widely used in industrial inverters, IGBT gate drivers, MOSFET gate drivers, induction cooktop and home appliances.

**Recommended Operating Conditions**<sup>①②</sup>

Characteristics	Symbol	Min.	Typ.	Max.	Unit
Input On-state Current	$I_{F(ON)}$ <sup>③</sup>	7	-	15	mA
Input Off-state Voltage	$V_{F(OFF)}$	0	-	0.8	V

**Note1:** The recommended operating conditions are given as a design guide necessary to obtain the intended performance of the device. Each parameter is an independent value. When creating a system design using this device, the electrical characteristics specified in this datasheet should also be considered.

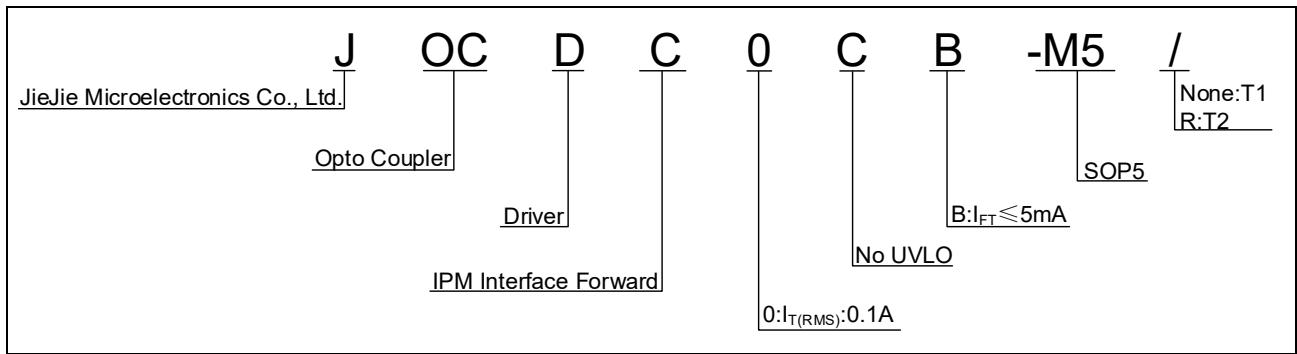

**Note2:** A ceramic capacitor(0.1 $\mu$ F) should be connected between pin 6 ( $V_{CC}$ ) and pin 4 (GND) to stabilize the operation of a high-gain linear amplifier. Otherwise, this photocoupler may not switch properly. The bypass capacitor should be placed within 1 cm of each pin.

**Note3:** The rise and fall times of the input on-current should be less than 0.5  $\mu$ s.

**Note4:** If the rising slope of the supply voltage ( $V_{CC}$ ) for the detector is steep, stable operation of the internal circuits cannot be guaranteed. Be sure to set 3 V/ $\mu$ s or less for a rising slope of the  $V_{CC}$ .

**Note5:** Denotes the operating range, not the recommended operating condition.
